Exercices d'application 4

Calculer R_{AC} et R_{BC} (α =55°).

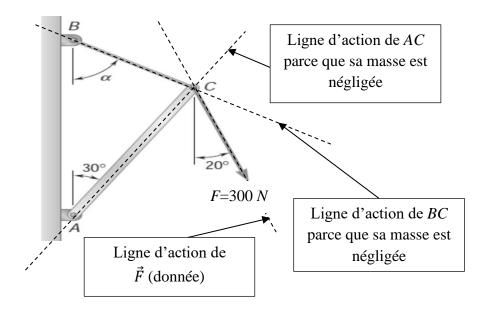

Fig. 1

Pour trois forces concourantes au point C on utilise la méthode des sinus (méthode optimale en temps):

Triangle d'équilibre

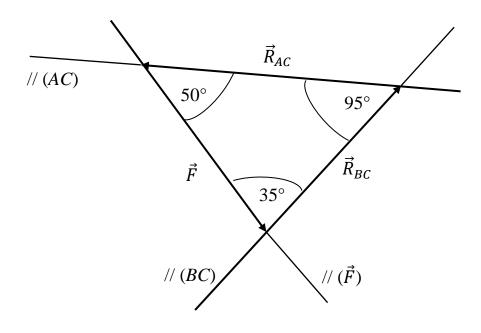

Fig. 2

Equations

$$\frac{Module\; de\; la\; force}{sur\; sinus\; de\; l'angle\; d'enface} = \frac{F}{\sin 95^\circ} = \frac{R_{AC}}{\sin 35^\circ} = \frac{R_{BC}}{\sin 50^\circ}$$

$$R_{AC} = \frac{F}{\sin 95^{\circ}} \times \sin 35^{\circ} = \frac{300}{\sin 95^{\circ}} \times \sin 35^{\circ} = 173 N$$

$$R_{BC} = \frac{F}{\sin 95^{\circ}} \times \sin 50^{\circ} = \frac{F}{\sin 95^{\circ}} \times \sin 50^{\circ} = 231 \, N$$
